Annex D Ornithological Survey Results

D.1 Flight Activity Records: Target Species

All flights of target species recorded and mapped and are detailed in **Table D-1**.

Table D-1: Details of target species recorded during flight activity surveys (sorted chronologically)

D.2 Scarce Breeding Bird Records

Table D-2 details all records of raptors and divers recorded during non-flight activity surveys.

Refer to **Confidential Appendix 9.2** for any additional confidential data.

During survey in 2025 along the Existing Forestry Access Track, no confirmed or possible breeding evidence of target raptors or divers was recorded. Observations of target species comprised a single red kite, hunting in the southeast of the survey area at Aultanfearn. Observations of buzzard were also recorded.

Table D-2: Raptor and diver records.

D.3 Black Grouse Records

Table D-3 details all black grouse records with lek numbers indicated where appropriate.

No observations of capercaillie, or signs of such, were recorded. No additional observations of black grouse were made during scarce breeding bird and moorland breeding bird surveys undertaken in 2025 along the Existing Forestry Access Track.

D.4 Moorland Breeding Bird Records

Breeding bird surveys were undertaken during the 2022, 2023 and 2025 breeding seasons and focussed on recording activity of wader species within the survey area (**Table D-4**).

No observations of target wader species were recorded during survey in 2025 along the Existing Forestry Access Track, with the predominant coniferous plantation habitats within the survey area unsuitable for breeding waders, waterfowl, ptarmigan and dotterel.
